

QUAT²RO® MONITORING

BRING TRANSPARENCY TO YOUR MACHINE OPERATION

“Configure your individual reporting and alarm notifications.”

QUAT²RO

You can forward our push notifications directly to your smartwatch.

QUAT²RO[®] System Intelligence is our new digital service brand, currently with the three modules of QUAT²RO[®] Monitoring, QUAT²RO[®] Remote Service and QUAT²RO[®] Analytics, which you can configure individually via <https://config.quat2ro.com>.

QUAT²RO[®] Monitoring offers you as a solution significantly more transparency for your machine performance. Networked machines are less prone to failure and provide data that can signal potential maintenance issues while enabling deep new insights into machine productivity, scrap rates and more. Strive for this standard of predictive maintenance. It's often the most efficient maintenance strategy available.

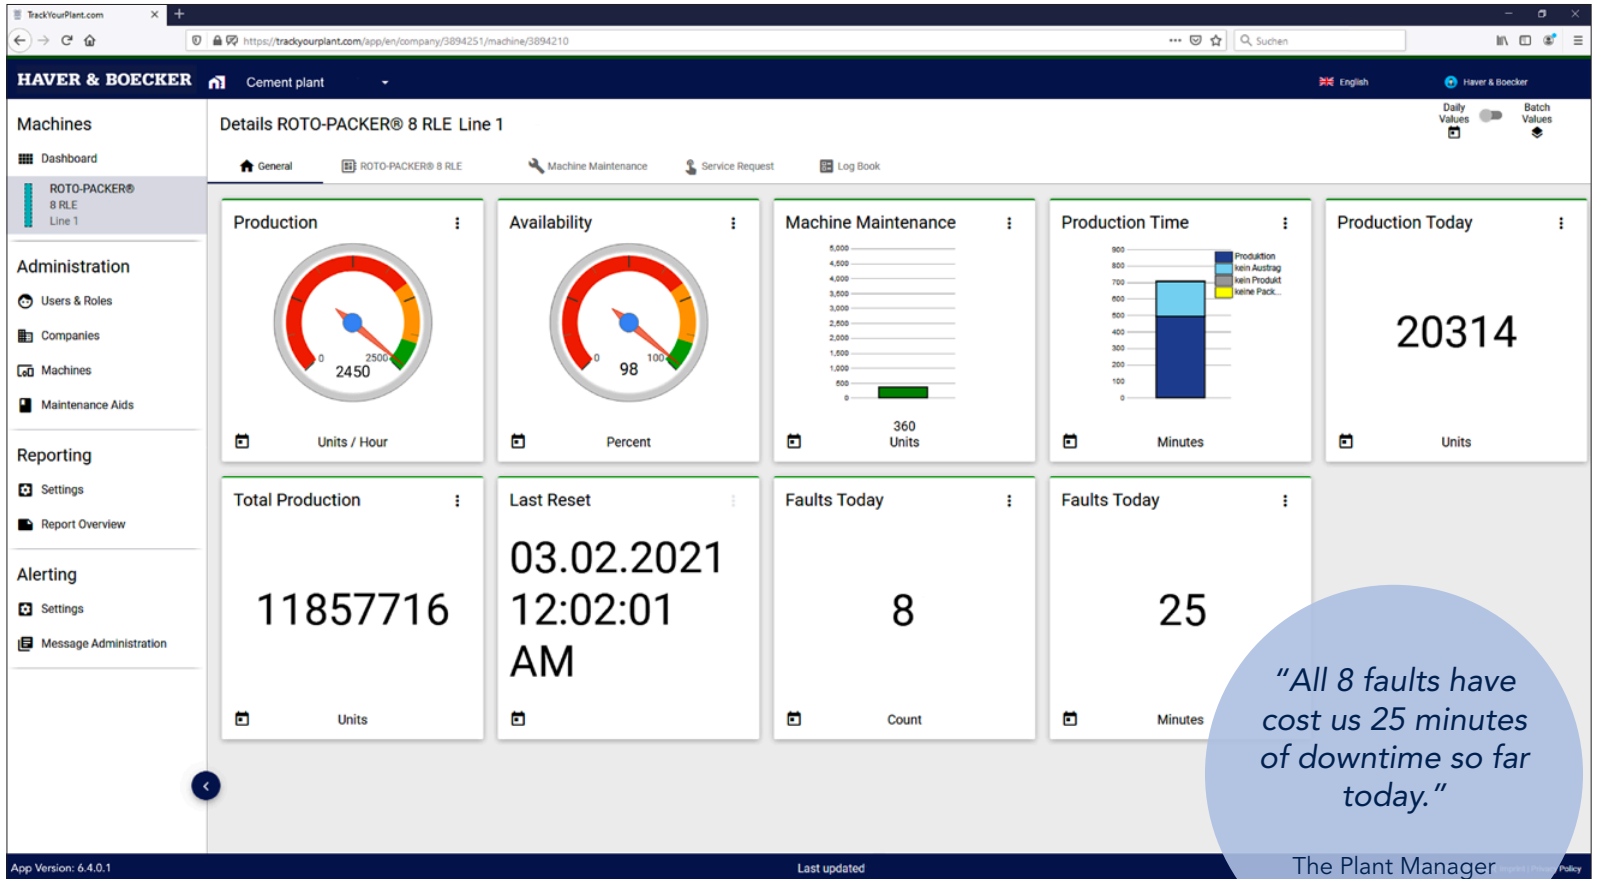

With this overview, we present to you an example of the data and information we can safely support you with QUAT²RO[®] Monitoring today!

QUAT²RO

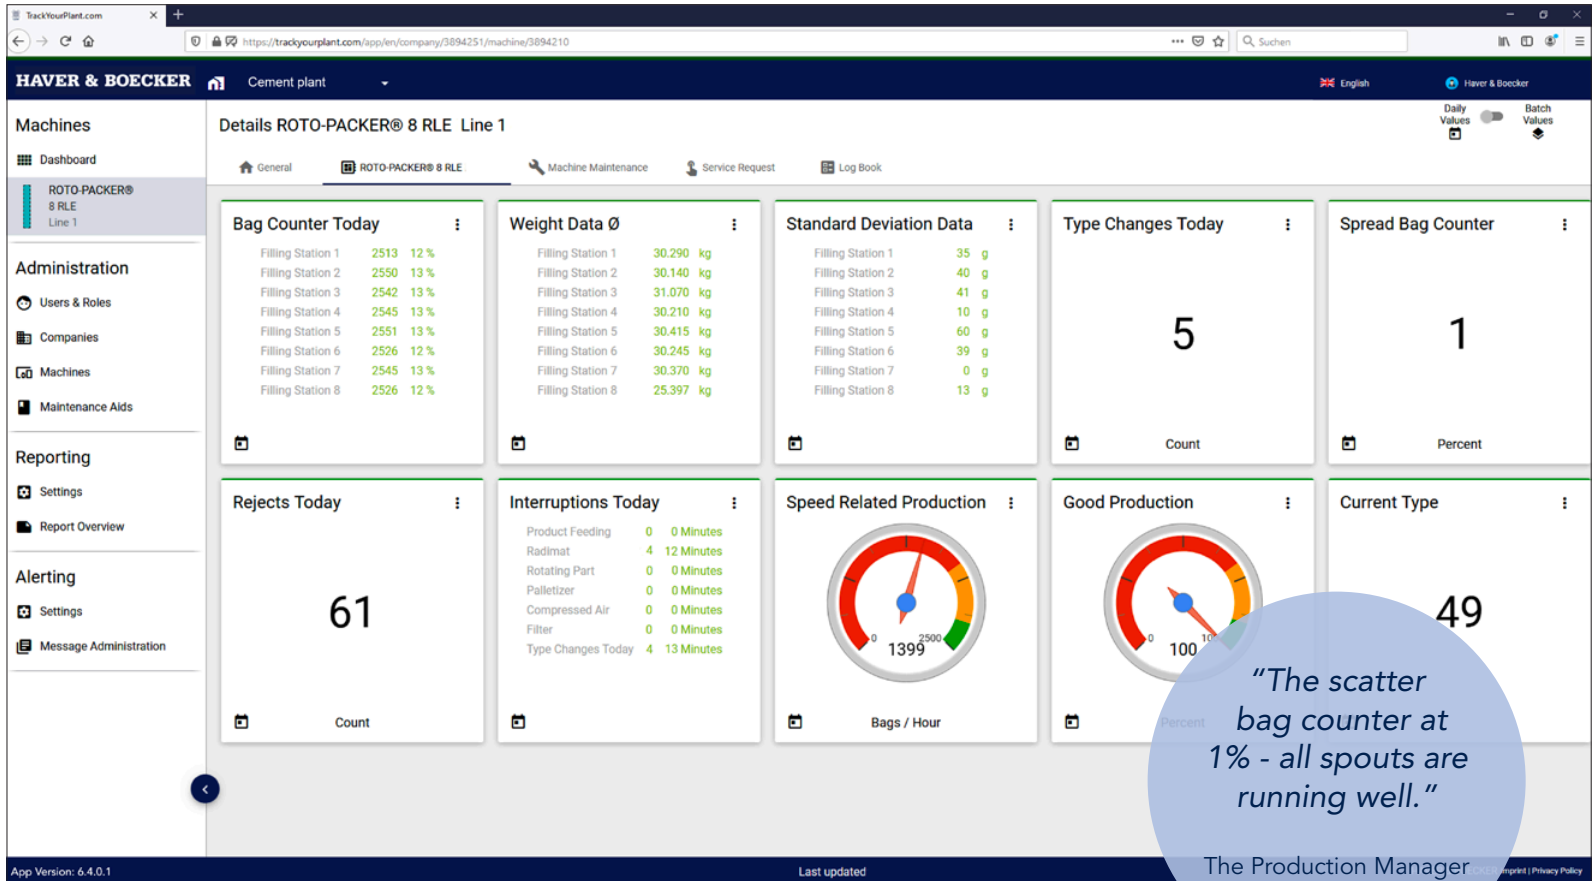

"Motivate your team. Give them the security and the perfect infrastructure with a learning affect."

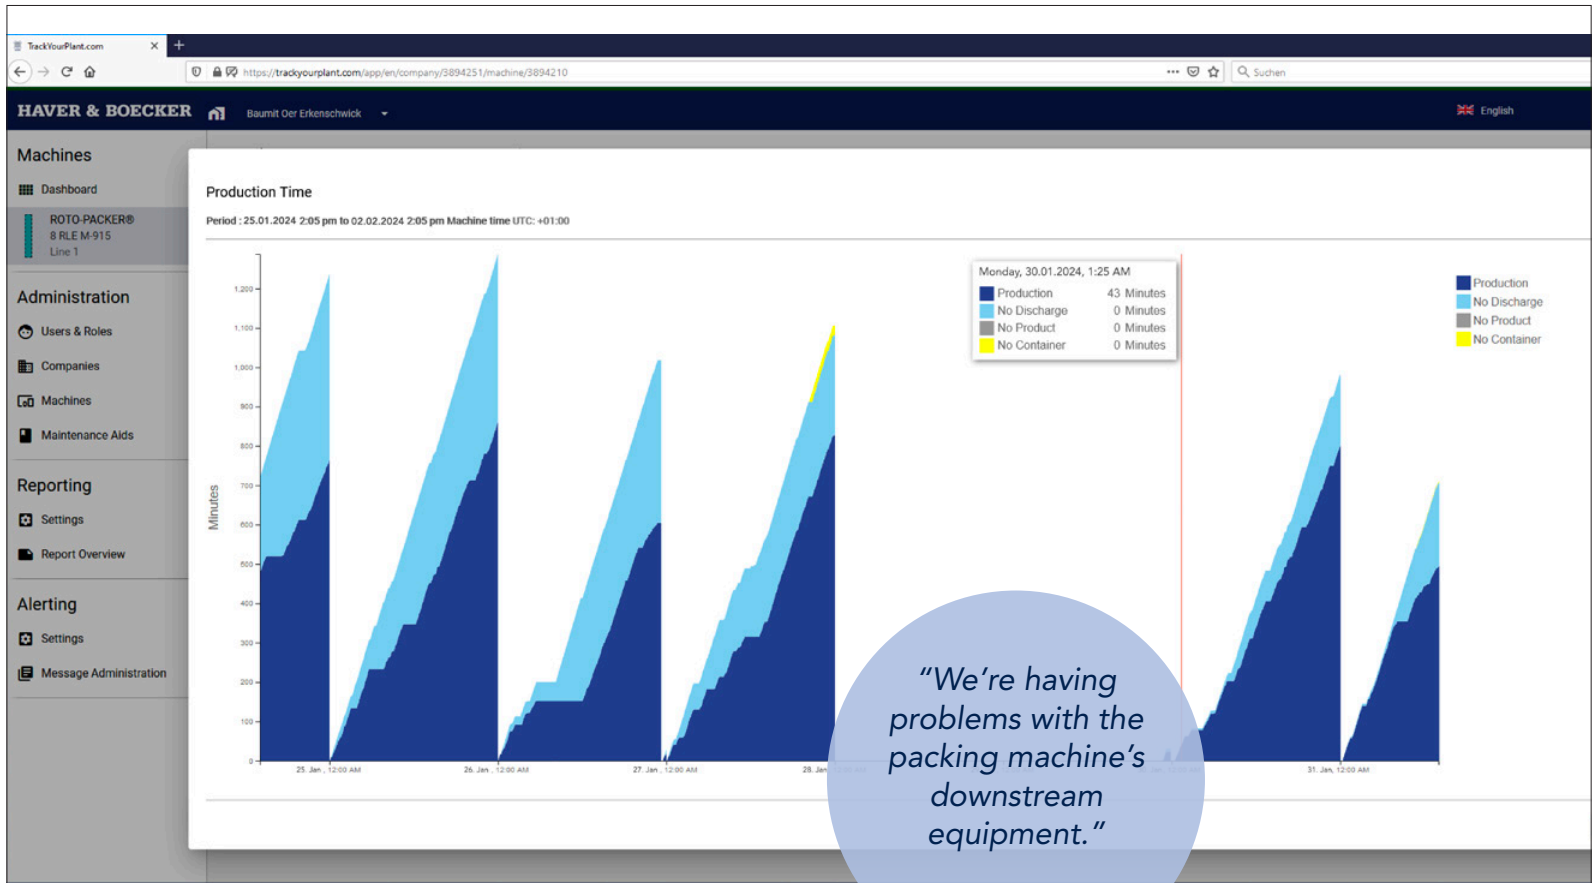

Scope of performance

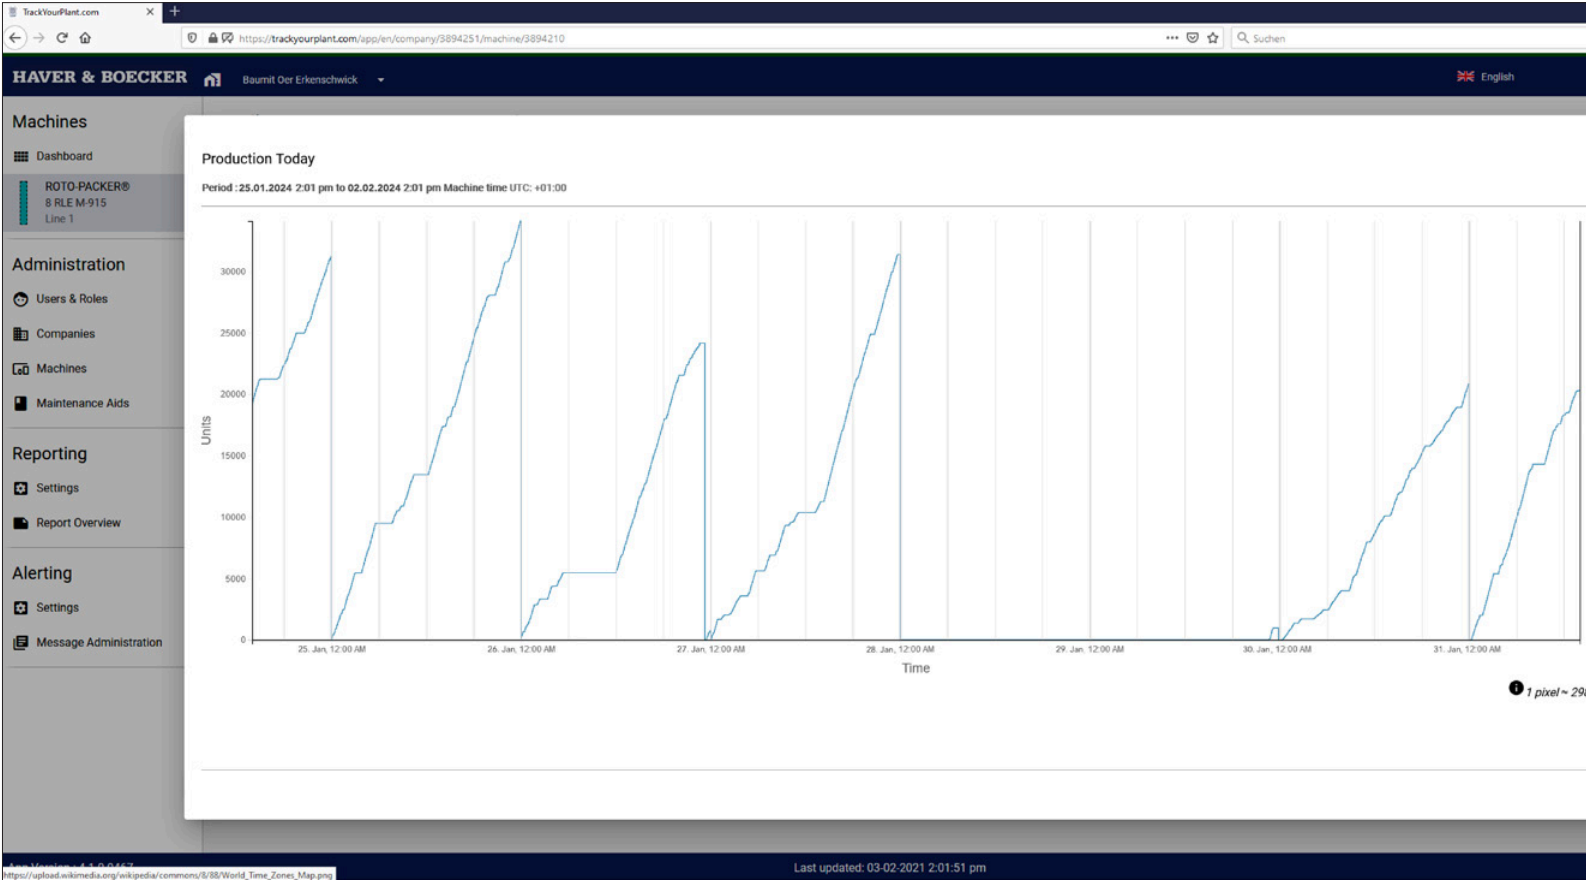

Detail overview

Week overview – production time

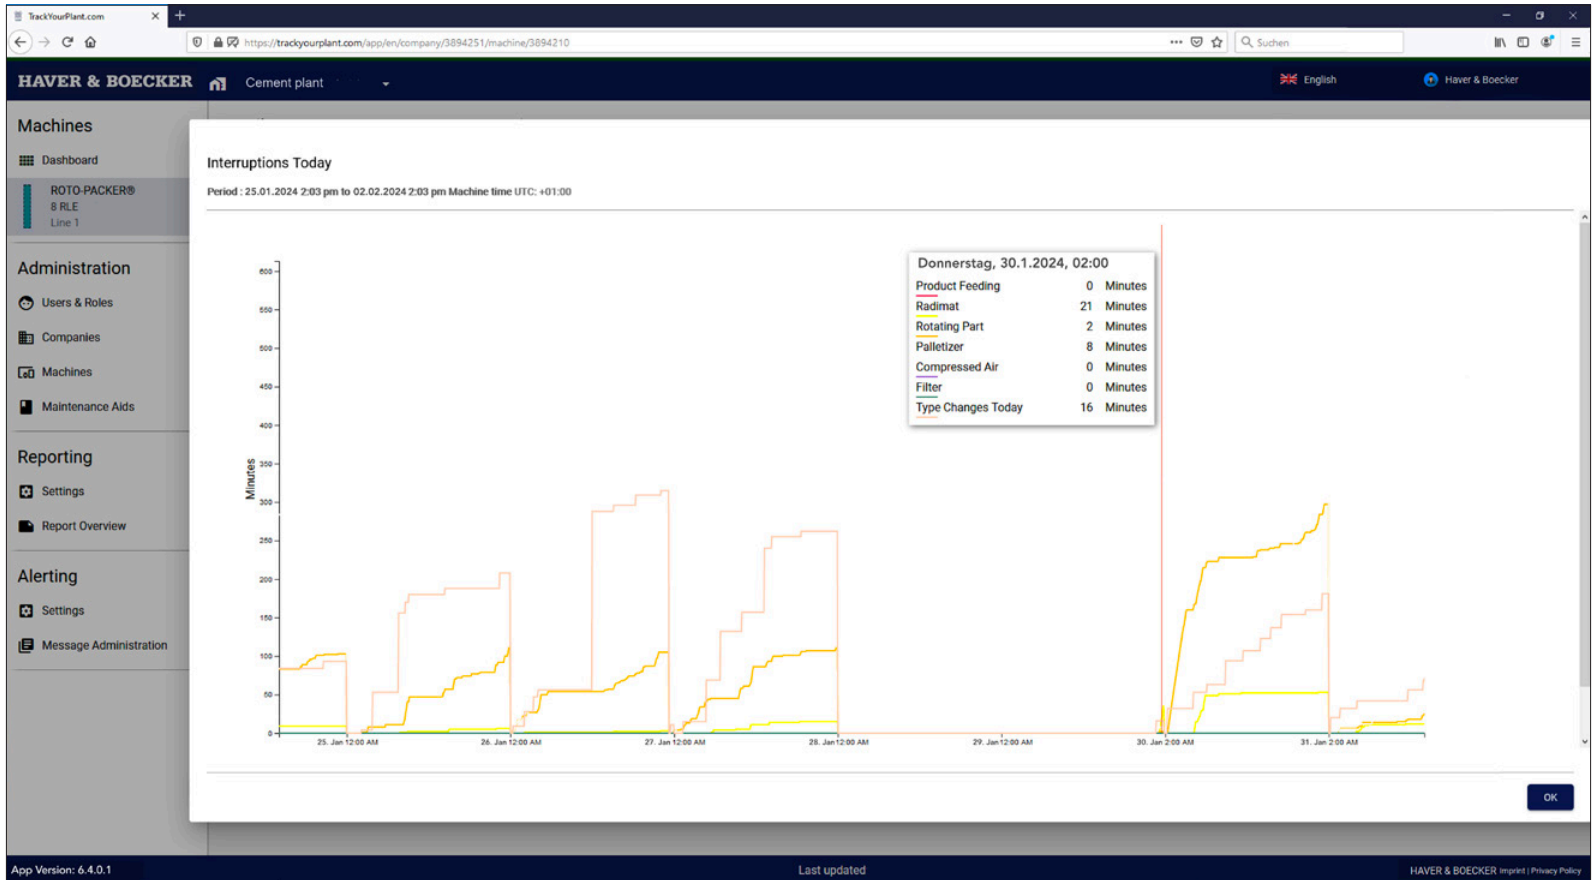

Week overview – day production

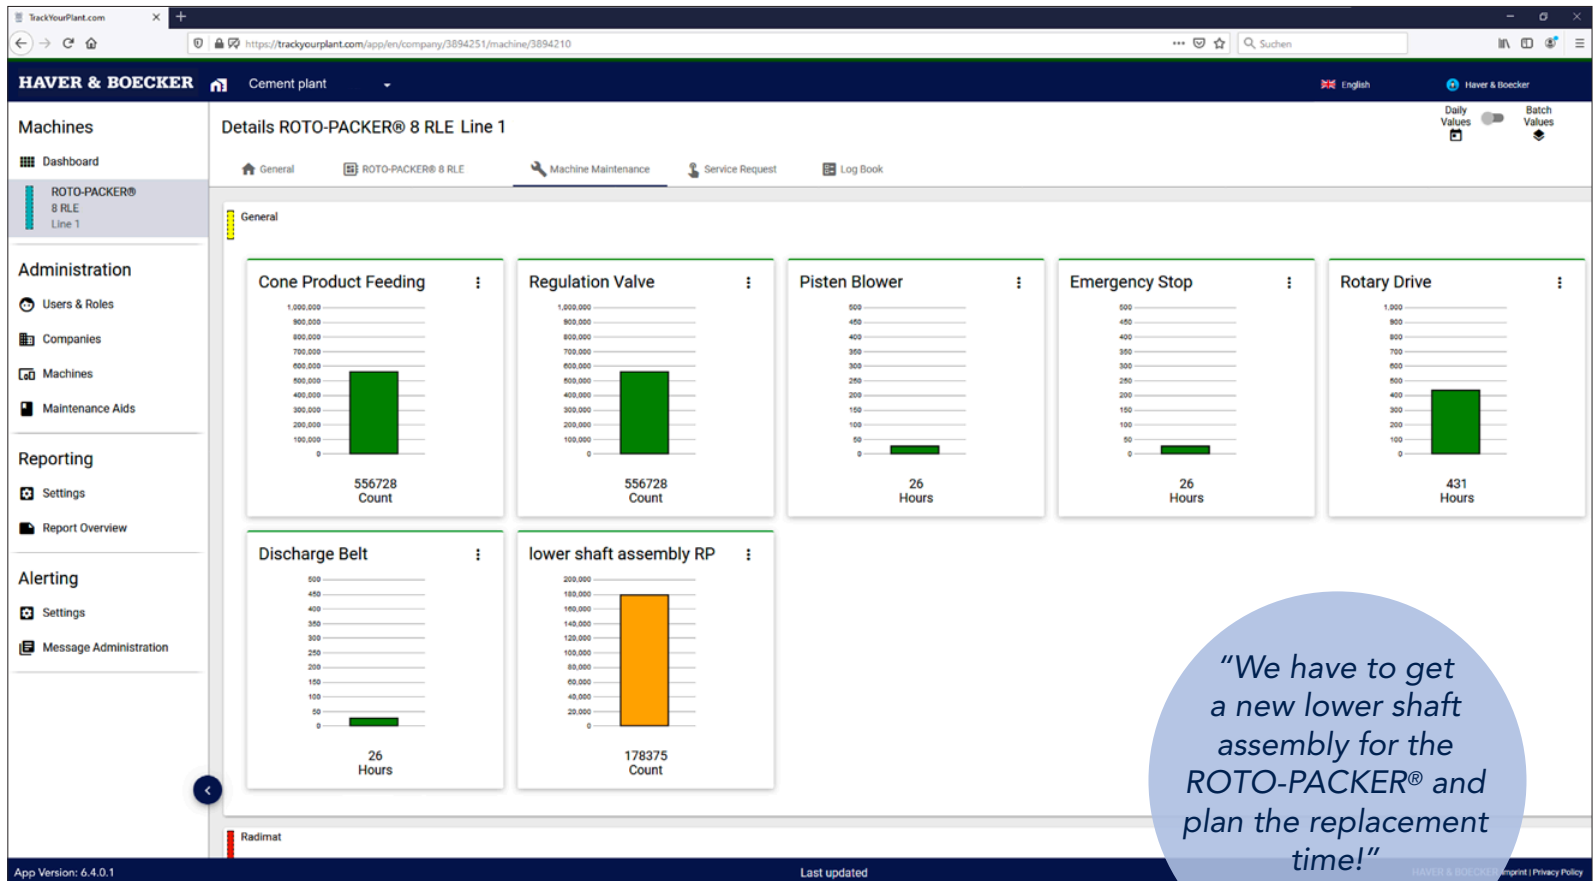

Order your spare parts 24/7 at our web shop – person to contact:
Andre Drinkuth, Phone +49 (0) 2522 30-551

Week overview – interruptions

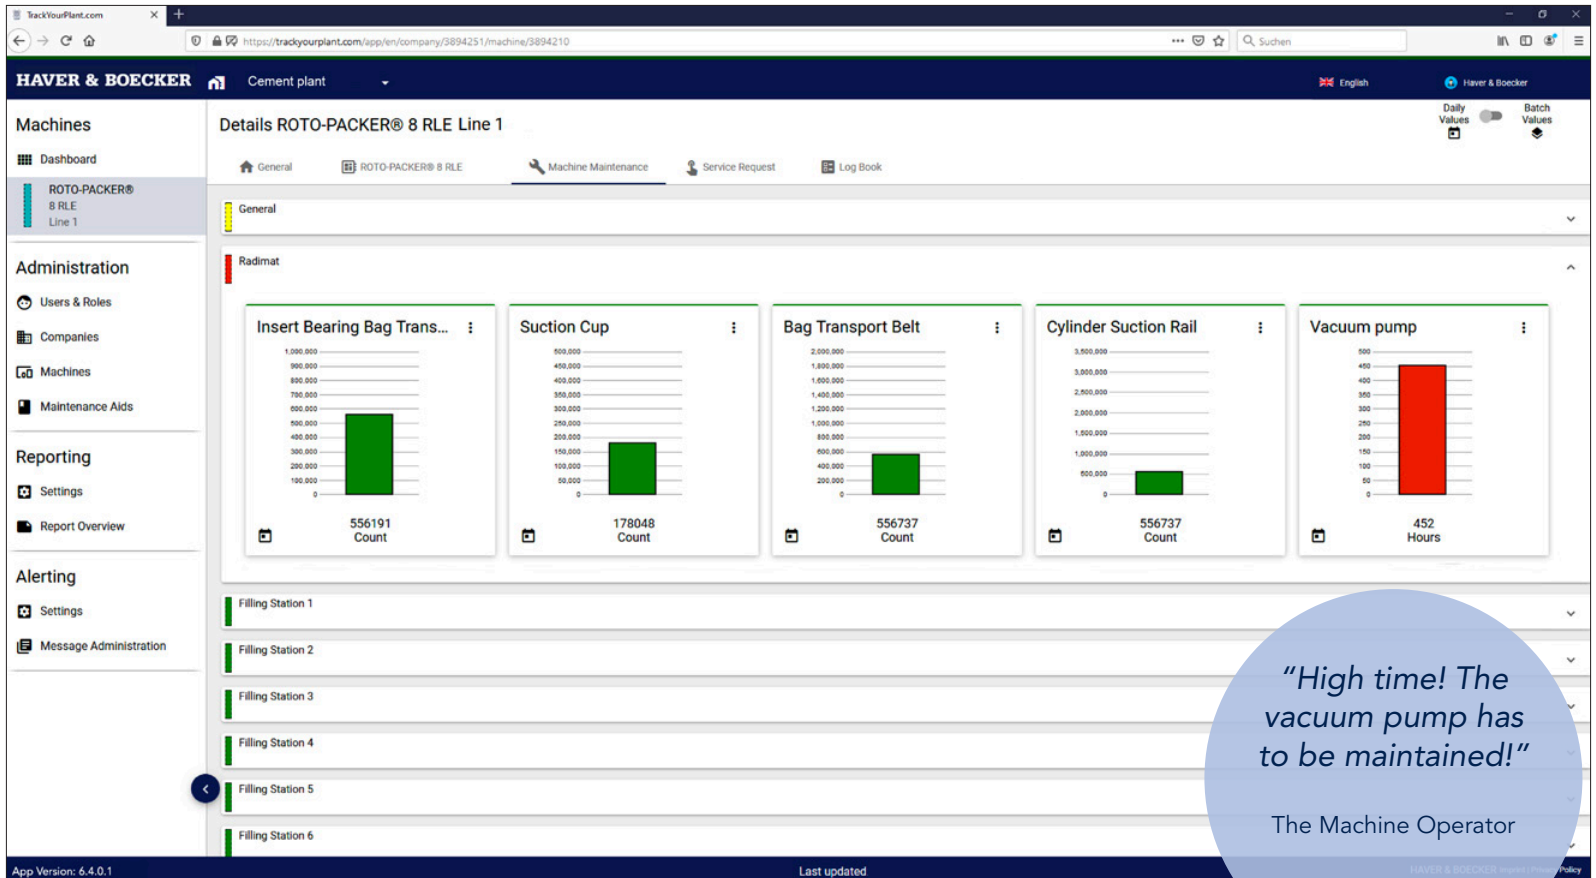

Predictive maintenance - general

"We have to get a new lower shaft assembly for the ROTO-PACKER® and plan the replacement time!"

The Maintenance

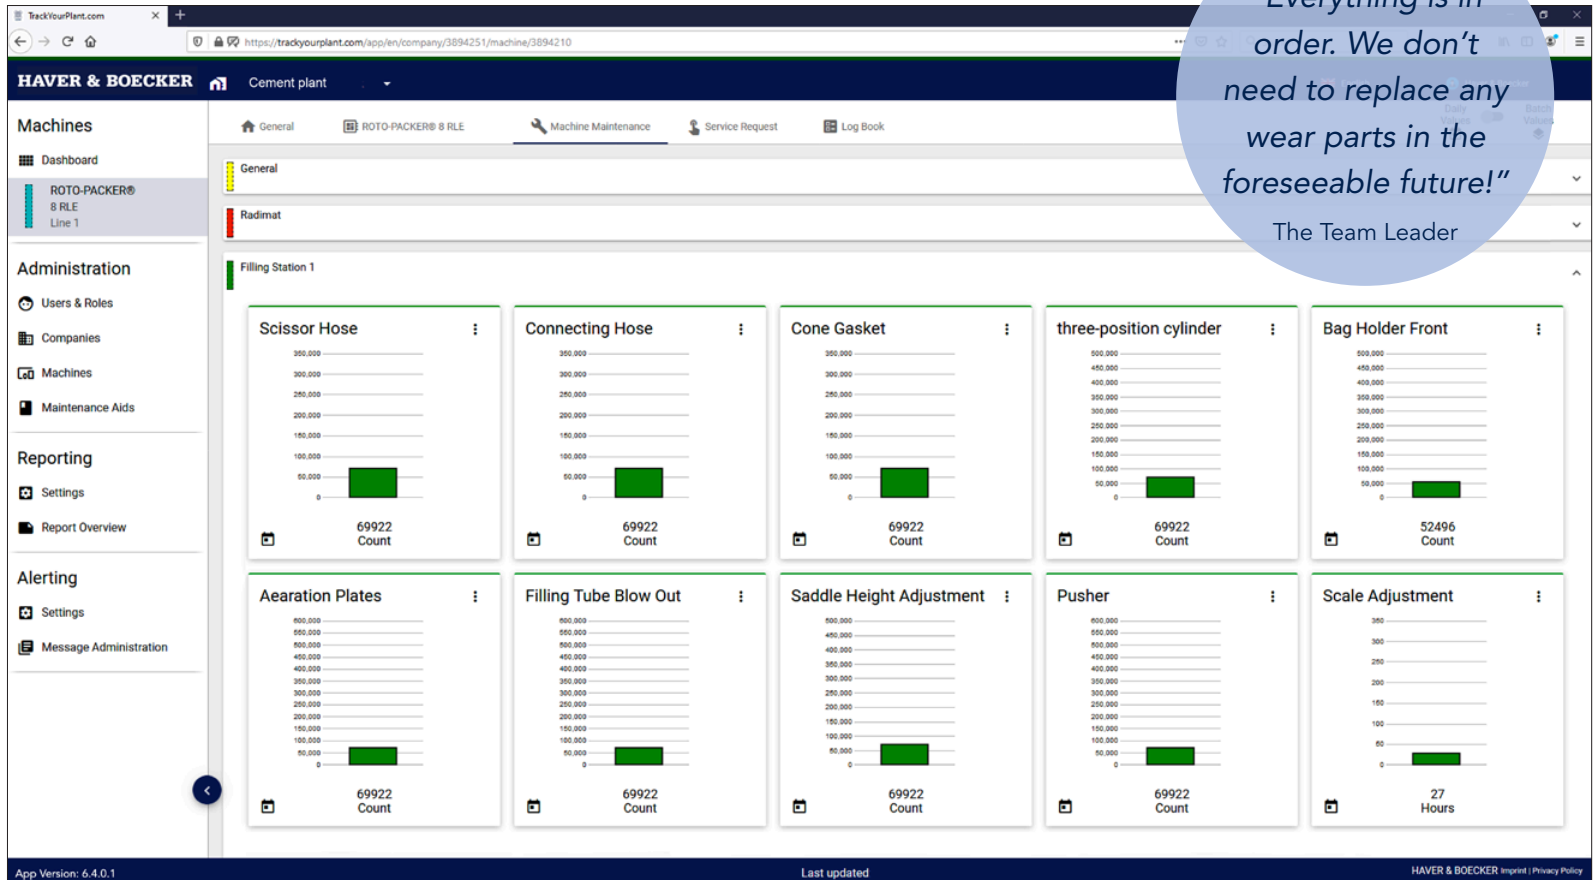

Predictive maintenance RADIMAT®

Predictive maintenance – each spout

“Everything is in order. We don’t need to replace any wear parts in the foreseeable future!”
